## Pricing Template

There are 2 main types of methods used to calculate pricing.

- Mark Up
- Margin

## Mark Up

Mark Up pricing is when you take the cost of a product and add certain amount to it to obtain the sell price.

## For Example:

You buy a product for $\$ 50$ and you sell it for $\$ 100$ then you have applied a $100 \%$ markup to obtain the sell price.

| Cost: | $\$ 50.00$ |
| :--- | :--- |
| Mark Up \% : | $100.00 \%$ |
| Sell Price: | $\mathbf{\$ 1 0 0 . 0 0}$ |

## Margin

Margin pricing is the \% of the selling price that is profit.

## For Example:

You buy a product for $\$ 50$ and sell it for $\$ 100$ then that product has a 50\% margin.

| Cost: | $\$ 50.00$ |
| :--- | :--- |
| Margin \% : | $50.00 \%$ |
| Sell Price: | $\$ 100.00$ |

Clients regularly get these two methods confused and it can have huge ramifications for the profitability of your business.
As you can see from the below table there is a considerable difference between the 2 methods.

| Mark Up | Margin |
| :---: | :---: |
| $10 \%$ | $9 \%$ |
| $25 \%$ | $20 \%$ |
| $50 \%$ | $33.33 \%$ |
| $75 \%$ | $42.86 \%$ |
| $100 \%$ | $50 \%$ |
| $150 \%$ | $60 \%$ |
| $200 \%$ | $66.67 \%$ |
